

# Data Exploration in R

# The Goal of Data Exploration

- Snoop your data
- Brief idea of what it's like
- No particular questions in mind
- Listening to your data

# levels(dataFrame\$column)

- See the value possibilities that a specific column has
- Only for factors
- Level = category

# unique(dataFrame\$column)

- See the value possibilities for a specific column
- Like levels but for numeric
- Each value only repeated once

# head(dataFrame)

- Shows the top 6 records by default
- n= allows you to put in a certain number of records to see instead

# tail(dataFrame)

- Shows the bottom 6 records
- n= allows you to put in a certain number of records to see instead
