

# Anatomy of a ggplot

# Load the Library!!

```
library("ggplot2")
```

# The Very Basics

# Changing a Variable Type for a Plot

```
ggplot(dataFrame, aes(x =type(column), y=column)) + geom_plotType()
```

Additional close parenthesis

Options include:

- factor
- date
- And More!

Column name in parentheses

# Changing the Scaling

Select x or y for axis

```
ggplot(dataFrame, aes(x =type(column), y=column)) + geom_plotType() + scale_y_log10()
```

Code

Options to make bigger:

- log
- log10

To make smaller:

- sqrt

And many more!

# Labels

```
ggplot(dataFrame, aes(x =column, y=column) +  
  geom_plotType() +  
  xlab("xLabel") +  
  ylab("yLabel") +  
  ggtitle("GraphTitle"))
```

Argument Names

Text must be in parentheses and quotes

# Plotting with Color

```
ggplot(dataFrame, aes(x =column, y=column) +  
  geom_plotType(color=column) +  
  xlab("xLabel") +  
  ylab("yLabel") +  
  ggtitle("GraphTitle"))
```

Additional factor variable  
Colors randomly assigned

Argument  
Name

# Plotting with Size

```
ggplot(dataFrame, aes(x =column, y=column) +  
  geom_plotType(aes(size=column)) +  
  xlab("xLabel") +  
  ylab("yLabel") +  
  ggtitle("GraphTitle"))
```

Additional factor variable  
Sizes assigned

Argument Name  
Use within aes()

# Plotting with Transparency

```
ggplot(dataFrame, aes(x =column, y=column) +  
  geom_plotType(aes(alpha=column)) +  
  xlab("xLabel") +  
  ylab("yLabel") +  
  ggtitle("GraphTitle"))
```

Additional factor variable  
Transparencies assigned

Argument Name  
Use within aes()

# Plotting with Multiple Graphs

- From the “gridExtra” package

`grid.arrange(plot1, plot2, ncol=1)` Number indicates vertical or horizontal

Named ggplots  
already created

Argument Name
